

Consent Form

I CONSENT TO HAVING AGILE PATENCY CAPSULE PROCEDURE.

Agile Patency Capsule Procedure is designed to verify functional patency of the small bowel prior to a PillCam SB or PillCam ESO capsule endoscopy. Capsule endoscopy is an endoscopic exam of the small intestine (SB) or esophagus (ESO). It does not replace upper endoscopy or colonoscopy.

I understand that there are risks associated with any endoscopic examination, including the Agile Patency Capsule Procedure, such as BOWEL OBSTRUCTION. An obstruction may require immediate surgery.

The Agile Patency Capsule Procedure includes the use of the Agile Patency Scanner or x-ray to verify the status and condition of the capsule approximately 30 hours after ingesting the capsule.

I understand that information obtained from my Agile Patency Procedure may be used, under complete confidentiality, for educational purposes in future medical studies.

Dr. _____ has explained the procedure and its risks to me, including any risks associated with the x-ray or scanner examination, along with alternatives of diagnosis and treatment, and I have been allowed to ask questions concerning the planned examination.

I authorize Dr. _____ to perform the Agile Patency Capsule Procedure.
